SCALER SCHOOL OF BUSINESS X IIT ROORKEE

Minds In Motion : Flipkart x COMET'26

Transforming Flipkart into Gen Z's Identity-led Commerce Platform

THE CORE INSIGHT : ***Gen Z doesn't shop for products, they shop for identity***

EXECUTIVE SUMMARY:

400M+ Gen Zs will shape India's $190B e-commerce market by 2030.
We win this shift through Campus Creator Flywheel, Multimodal Discovery, Theme-Based Shopping + Web Series, and Flipkart Thrift, designed to maximize wallet share, repeat loops, and stickiness.

Create → Discover → Try → **Express** → Resell → Repeat

Gen Z behaviour e-commerce

Gen Z ready for our solution

Gen Z shops through identity and moments
Flipkart still runs on search and grids

Three real users. Three unmet needs. One structural gap.

Riya Sharma 20

BBA Student | Pune

Micro-creator (6K)

Aspires to be a **campus style icon; trusts** local creators over brand ads.

Psychographics
- Social-status driven
- Authenticity > polished ads
- Belonging via city culture
- Learns from peers & creators

Behavior
- Posts GRWM/campus reels
- Follows city IG pages
- Shops via creator links
- Engages with UGC > ads

Pain Points
- No content infra/mentorship
- Hard to monetize influence
- Quality & sizing uncertainty

Triggers
- Campus competitions
- City page features
- Creator rewards & collabs

Maps to Strategy 1: Campus Creator Flywheel

Aarav Mehta 26

Product Analyst | Bengaluru

Working Professional

Shops around **moments** (trips, work, events); wants **speed + confidence**.

Psychographics
- Aspiration-led & image-conscious
- Values efficiency & smart tools
- Pays for quality & complete looks
- Time-poor, high intent

Behavior
- Screenshots from IG/Pinterest
- Voice-notes shopping needs
- Shops late-night pre-trip/meetings
- Forgets accessories/essentials

Pain Points
- Decision fatigue
- Inconsistent sizing/fit fear
- Incomplete & fragmented baskets

Triggers
- Business trips/offsites
- Office presentations/weddings
- Travel packing moments

Maps to Strategy 2: Multimodal Discovery (VTO + Voice + Visual)

Kabir Khan 23

Software Engineer | Jaipur → Bengaluru

First-Salary Lifestyle Upgrader

Buys transformations — room makeovers, setups, thrift finds with a **story**.

Psychographics
- Main character energy
- Values uniqueness & stories
- Sustainability-positive
- Budget-smart, quality-seeking

Behavior
- Binge watches makeovers
- Follows thrift & creator closets
- Saves 'before/after' setups
- Shops complete scenes

Pain Points
- Overwhelmed by choices
- Budget vs premium dilemma
- Mass-market feels generic

Triggers
- Moving to new city
- First salary / room upgrade
- Thrift drops & scarcity
- Shop this transformation

Maps to Strategy 3: Shoppable Web Series + Thrift Vertical

Real discovery journey

This shifts Flipkart's problem from search optimization to identity-led discovery infrastructure.

Key insights:

1. **Search is not the starting point**
   70% of Gen Z discover products via feeds and social algorithms. Discovery is passive, visual, and happens mid-scroll not via intent.

2. **Gen Z spends emotionally, not rationally**
   They are hyper-frugal on essentials, but spend heavily on identity signals."Micro-luxuries" become a way to express status and individuality.

3. **Trust has shifted to creators**
   Micro-influencers are trusted more than brands or platform reviews. Creator-led recommendations are now the primary purchase trigger.

4. **Shopping is fragmented across platforms**
   Discovery, validation, and purchase happen across Instagram, Pinterest, WhatsApp.
   Commerce is no longer a single-platform journey.

They don't buy products — they buy identity

Flipkart's Right to Win the Gen Z Commerce Shift

The gap is not assortment. It is discovery, identity, and life-moment orchestration.

What Flipkart already has

Scale & Reach
34% of e-commerce platform in India with deep Tier 2/3 penetration

Diverse Assortment
Fashion, beauty, home, tech, travel, toys, healthcare, travel, books, etc

Quick-Commerce
Delivery under 30 mins

Niche Demand
Spoyl (GenZ trends), Flipkart Green, Flipkart Samarth

Flipkart Labs
Web3, Metaverse, AR, VR, Gen AI

Where Flipkart falls short

Discovery is still search-led
Grid + keyword UX, not feed-based or identity-driven

No identity layer
No way to shop by vibe, aesthetic, or persona

Weak creator ecosystem
Influencers drive discovery off-platform, not within Flipkart

Journey is fragmented
Discovery, validation, and purchase happen across multiple apps

Where Flipkart's RTW

Creator-Led Discovery
Gen Z Discovery Rate, Creator Integration & Content-to-Commerce

Multimodel Discovery
AR Try-on Usage, Visual Search, AI voice-based search

Transformation web series
Turn assortment category into life moment solution

Lifecycle Commerce
Turn sustainability + trust + repeat ownership into circular Gen Z wallet loops

Connecting Flipkart's existing strengths into one Gen Z identity graph can unlock double-digit wallet share growth and repeat discovery behavior.

Campus Creator Challenge + Regional UGC Flywheel

Competition Funnel

1. **Registration Open**
   Campus ambassadors promote across 50+ colleges
2. **Quality Filter**
   Engagement rate, content quality, niche alignment
3. **Creator Cohort Selected**
   200 creators enter 90-day UGC program

Regional Instagram Pages

- IG **@flipkart.campus.lr** — Bengaluru
- IG **@flipkart.campus.pune** — Pune
- IG **@flipkart.campus.jai** — Jaipur
- IG **@flipkart.campus.del** — Delhi NCR

City-aesthetic driven, trend-based, creator-first content that resonates with local Gen Z communities

Creator Studio Infrastructure

Camera Setup | Lighting Kit | Hook Templates | Storytelling Workshops | Analytics Dashboard

- **Level 1** — Cash Prize + Meet & Greet
- **Level 2** — Meet & Barter
- **Level 3** — Barter + Samples

90-Day Pilot ROI

Pilot Spend ₹60L	GMV Generated ₹1-2Cr
ROI 1.7-3.3x	Discovery Capture 3-5%

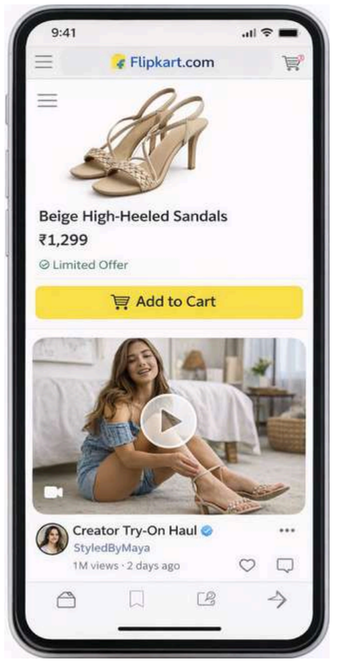

- Anticipate Gen Z Trends
- Make Data-Driven Inventory Decisions
- Enhance In-Platform Discovery

Trend Intelligence Engine

What creators should shoot next

- **Social Listening** — IG, TiKtok, Pinterest creator velocity
- **Competitor + Global Trend Feed** — pricing, drops, aesthetics, silhouettes
- **Flipkart Micro-Trend Spotting** — search spikes, PDP velocity, UGC metadata
- **1–4 Week Forecast Output** — Weekly briefs → scripts → hooks → creator prompts

PDP Floating Reel CTA

Source: Bain India e-commerce, Gen Z social commerce, TikTok Shop, Xiaohongshu, Poizon / Dewu, Wyzowl

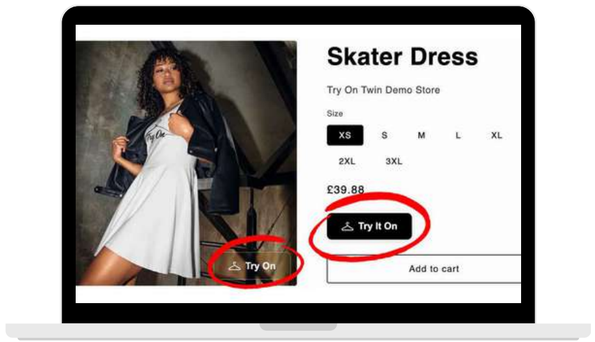

Flipkart Labs Multimodal Discovery Engine

Reducing cognitive load through voice, visual, and virtual discovery

Virtual Try-On

Upload your image/avatar and try outfits virtually before buying

- Compare full looks
- Add accessories
- Reduce fit uncertainty

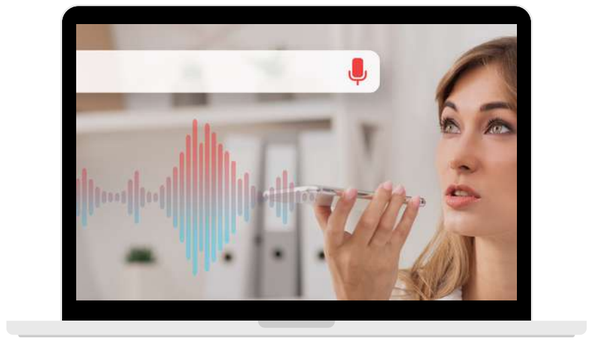

Gen Z Behaviour → User Behavior **See It**

Voice AI Intent Search

Describe your life moment naturally, AI builds complete baskets

"I need clothes for my IIT Roorkee case competition trip"

Travel bag, formal wear, sneakers, grooming kit, power bank...

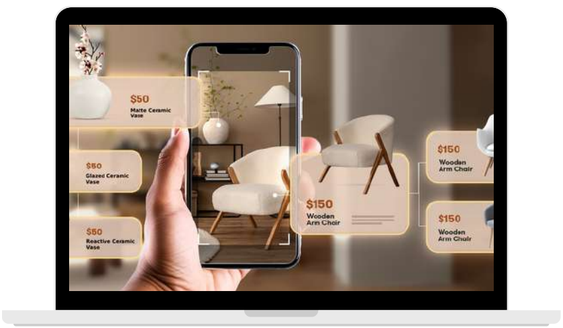

User Behavior **Say It**

Visual Search: Shop the Look

Upload any image and find similar or vibe-matching products instantly

- Instagram/Pinterest uploads
- Celebrity looks
- Room aesthetics & desk setups

User Behavior **Try It → Buy It**

+18-25%	+12-18%	-8-10%	+20-25%
Basket Width	AOV Uplift	Returns	Repeat Usage

Effort vs Impact

Medium Effort

Very High Impact

Source: McKinsey agentic commerce NRF AI retail Morgan Stanley agentic commerce personalization trend reports

Theme-Based Shoppable Web Series

Turning real Gen Z chaos into binge-worthy makeover content

Web Series Themes

1 Moving to a New City

First apartment setup, essentials haul, budget-friendly transformation

2 Hostel Room Transformation

From boring dorm to aesthetic sanctuary on a student budget

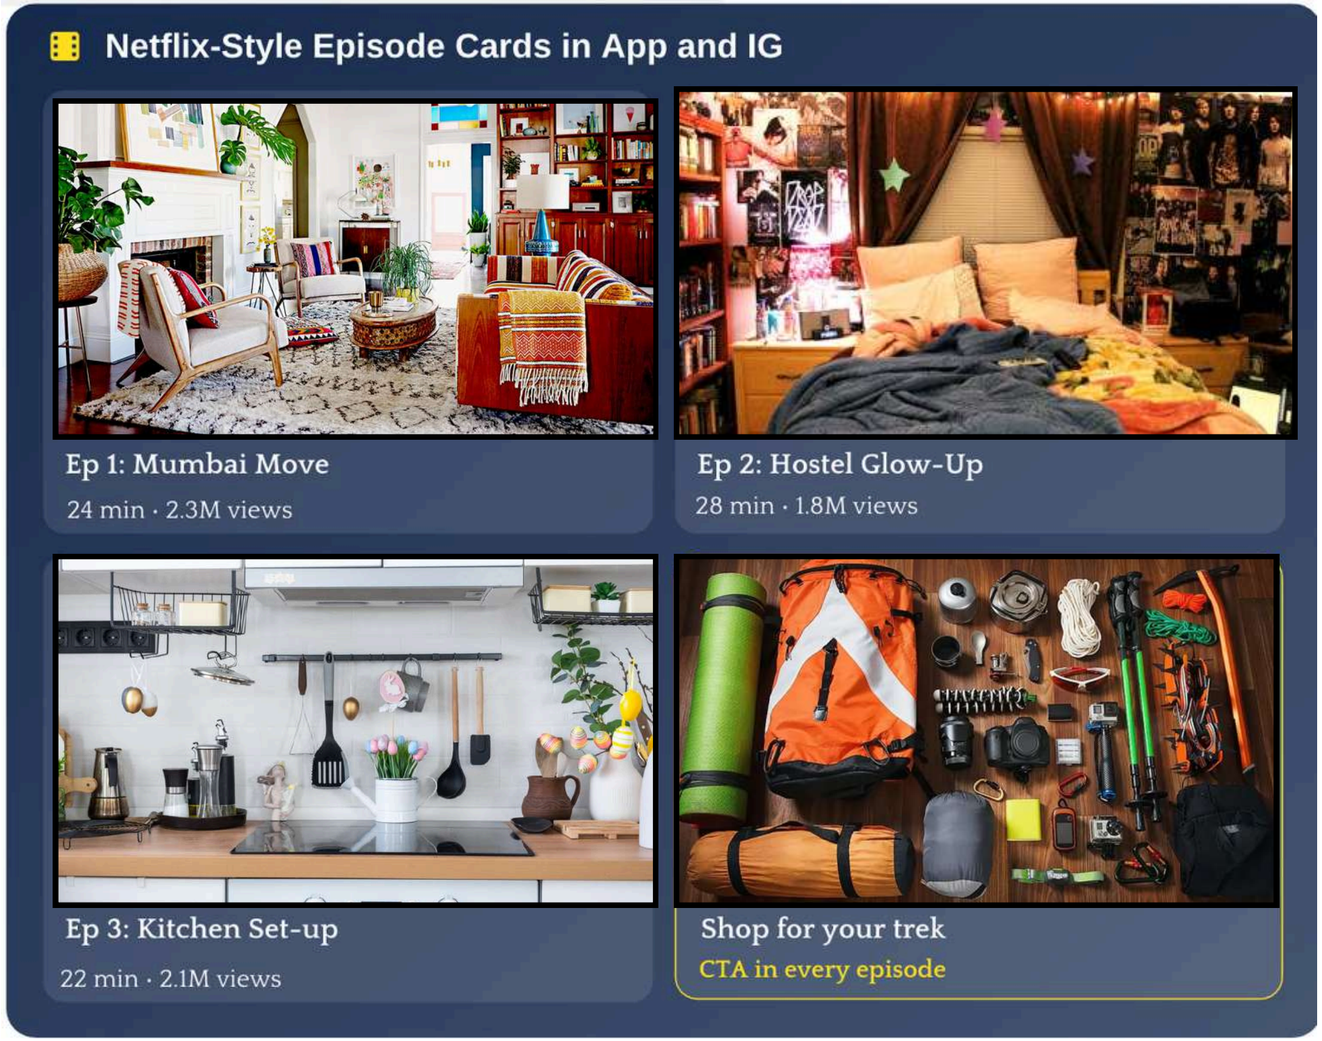

3 Kitchen set up

Professional wardrobe + essentials for the cookings as per desire

- Users submit real problems → Flipkart solves it on camera → entertaining before/after → subtle product integration → one-click "Shop This Setup" bundles

Why This Wins

- **Solution commerce** > SKU commerce. One life problem = 8–12 category attachments in a single basket
- **Bingeable + seasonal**: Hostel episode replays every admission cycle. +30–40% Gen Z browse time
- **Flipkart's moat**: Only platform with home + tech + fashion + beauty to deliver a complete room transformation

Kabir's moment: He just moved to Bengaluru for his first job. He watches a "first apartment setup" episode, relates instantly, and shops the entire

"Shop this transformation" CTA
One-click bundle purchase directly from video

Flipkart Thrift

A creator, celebrity, and community-led recommerce marketplace for Gen Z

Three Supply Engines

Celebrity & Influencer Closet Drops

FOMO-Driven | High Virality

Top creators list signature outfits, sneakers, accessories. Users buy a piece of their identity — not just the product, but the story and social currency.

Instagram Thrift Shop Aggregation

Trust Layer | Nationwide Reach

Onboard India's fragmented IG thrift ecosystem into a trusted marketplace layer with logistics, payments, and authenticity verification.

Peer-to-Peer Gen Z Closet Resale

Community | Sustainability

Users resell once-worn fest outfits, event wear, campus fashion. Creates a self-sustaining circular inventory flywheel.

India Thrift Market

2024 **$3B** → 2032 **$9.1B**

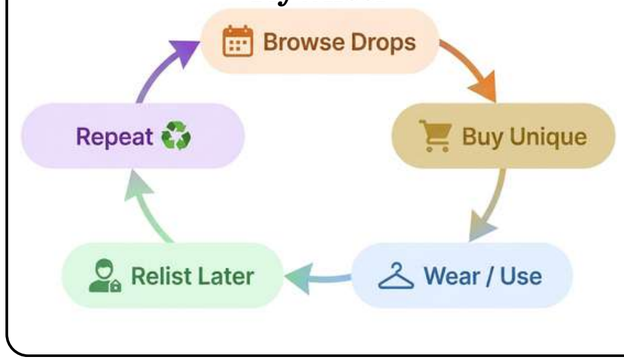

13% CAGR
Fastest growing e-commerce market in Asia Pacific

WHY Flipkart WINS THRIFT

TODAY (BROKEN)
IG DMs, no returns, fake sellers, payment fraud, no quality checks

FLIPKART THRIFT
National logistics, fraud prevention, trusted payments, quality checks, Tier 2/3 reach

Thrift Behavior Flywheel

24-MONTH IMPACT

METRIC	TARGET
Gen Z Fashion Wallet Share	+5–7%
Thrift GMV (Year 2)	$100M run-rate
CAC via Creator Drops	Near-zero
DAU/WAU Lift (Gen Z)	Very High

Source: India recommerce databook Research & Markets recommerce forecast Gen Z sustainability behavior

Implementation Roadmap

24-month phased rollout from pilot to national scale

0-3M

Pilot & Validate

- Launch Campus Creator Challenge in 3 cities (BLR, Pune, Jaipur)
- Flipkart Labs A/B test: Visual search + basic try-on
- Regional IG pages live with 50+ creators

KPI: 200 creators, ₹1-2Cr GMV

3-6M

Scale Content

- PDP floating reel CTA across fashion categories
- Web Series Season 1: 6 episodes, 3 themes
- Expand to 10 college cities

KPI: 3-5% discovery capture

6-12M

Launch Thrift

- Flipkart Thrift vertical launch with celebrity drops
- Top 25 campuses activated
- Voice AI intent search rollout

KPI: ₹3-5Cr thrift GMV

12-24M

National Scale

- Personalization engine + creator flywheel
- Web Series Season 2 & 3
- Thrift P2P marketplace fully operational

KPI: ₹70-100Cr total GMV

Milestone 1
Creator cohort validated

Milestone 2
Content-to-commerce proven

Milestone 3
Thrift market captured

Milestone 4
Gen Z platform dominance

Trade-offs, Risks & Success Metrics

Honest assessment of what we're choosing and what we're saying no to

Strategy	What We're NOT Doing	Biggest Risk	6-Month KPI	2-Year KPI	Mitigation
S1 Campus Creator Challenge	• Hiring expensive macro influencers • Pan-India launch day 1 • Overbuilding creator app pre-validation	UGC quality inconsistency; creator drop-off after rewards	200 creators ₹1-2Cr GMV 3-5% capture	Top 25 cities ₹20-30Cr GMV -25% CAC	90-day pilot; cohort scorecards; only top 5% reels on PDP
S2 Multimodal Discovery	• Building separate AI shopping app • Forcing voice as primary mode • Over-personalizing pre-accuracy	Bad voice parsing; visual mismatch frustration; AI over-bundling	15% adoption +12% AOV -10% returns	30% search share ₹50Cr+ GMV +20% attach	Start with top 5 use cases; confidence thresholds; human-in-loop
S3 Shoppable Web Series	• Celebrity-only glossy content • Long expensive OTT shows • Hard-selling in scripts	Expensive production; virality may not convert; theme fatigue	₹1.2-2Cr GMV 3-5x ROI +20% attach	₹15-20Cr GMV 7x reuse ROI 10 themes	6 episodes pilot; seasonal reuse; modular bundles; UGC submissions
Flipkart Thrift	• Luxury resale first • Unmanaged P2P without trust • Every used category initially	Counterfeit risk; inconsistent quality; logistics cost per item	₹3-5Cr GMV 70% sell-through 25% repeat	5-7% wallet share ₹50Cr GMV 500 sellers	Fashion + accessories first; verified sellers; mandatory quality checks

KPI targets are pilot-stage guesstimates triangulated using primary research, social commerce benchmarks, AR commerce studies, and India recommerce reports.

The Bottom Line

Transforming Flipkart into India's most relatable Gen Z identity commerce platform

15+ %
Gen Z Wallet Share
Capturing more of the $860B Gen Z spending power

₹100+Cr
Incremental GMV
Within 24 months from Gen Z-focused initiatives

15+ %

Gen Z India

Flipkart becomes India's most relatable Gen Z identity commerce platform

From utility commerce to **identity-led discovery** — where creators drive trust, AI reduces friction, and every purchase is a statement of who you are.

Creator-Led **AI-Powered** **Sustainable** **Identity-First**

APPENDIX

Metric	Reworked Guesstimate	Why It Matters
Pilot investment	**₹60L**	competition + rewards + studio + regional pages
Creator cohort built	**200 creators**	long-term low-CAC content supply engine
UGC assets generated	**4,000–5,000 videos**	reusable across IG + PDP + category pages
Gen Z reach created	**20–25M impressions**	campus virality + regional IG + creator cross-posting
Traffic to Flipkart	**3–4 lakh visits**	stronger top-funnel from viral city pages + PDP reels
PDP floating reel CTR uplift	**+8–10%**	creator proof improves discovery-to-click
Incremental GMV generated	**₹3–4 Cr**	creator bundles + PDP upsell + repeat browse
ROI	**5x–6.5x**	GMV return on pilot spend
Gen Z discovery capture	**6–8%**	5 pilot cities in 90 days
Blended CAC (effective)	**₹150–₹200 / activated Gen Z user**	much lower due to owned creator content loops

Key Assumptions (90-Day Pilot)

- Pilot scope: ₹60L across 5 high-Gen-Z, low-GMV cities
- Creator supply: 200 campus creators selected through competition funnel
- Content output: 4,000–5,000 videos reused across IG, PDP, and category pages
- Reach assumption: 20–25M impressions from campus virality + city IG pages + creator reposts
- Traffic conversion: 1.5–2% blended CTR → 3–4 lakh Flipkart visits
- GMV driver: creator bundles + floating PDP reel CTA + repeat browse loops
- ROI logic: ₹3–4Cr incremental GMV ÷ ₹60L pilot spend = 5x–6.5x ROI
- Why this is fair: this is owned creator infrastructure, not paid media, so CAC stays low and content keeps compounding beyond 90 days

Long-term ROI improves further as city pages, creator cohorts, and PDP assets continue compounding beyond the pilot.

APPENDIX

Metric	Modeled Guesstimate	Why It Matters
Incremental productization layer	**₹35–40L**	UX layer + integration on top of Flipkart Labs
Virtual try-on usage rate	**8–10% of fashion PDP traffic**	reduces uncertainty before purchase
Voice AI search adoption	**5–7% of Gen Z search sessions**	captures intent in natural language moments
Visual search / Shop-the-Look adoption	**6–8% discovery sessions**	bridges inspiration → SKU instantly
Search-to-product discovery time	**↓ 30–40%**	less cognitive load, faster checkout (ResearchGate)
Basket width uplift	**+18–22%**	unmet needs discovered through multimodal journeys
Fashion conversion uplift	**+10–15%**	try-on + visual confidence + voice bundles (congruencemarketinsights.com)
Return-rate reduction	**↓ 8–12%**	better fit confidence + style validation (Vogue)
Incremental GMV uplift (12M)	**₹8–10Cr**	fashion + home + trip + room bundles
ROI (12M modeled)	**20x–25x**	high leverage due to existing Labs investment

- Key Assumptions (12-Month Product ROI)
- Base assumption: Flipkart Labs already owns the core AR/VR + GenAI capability
- Incremental cost: only productization + UX integration + recommendation tuning
- Virtual try-on improves fashion confidence and reduces return behavior
- Voice AI search captures complex Gen Z intent like trips, room setups, case comps
- Visual search reduces discovery friction and cuts product finding time by ~38%
- Cross-sell logic: multimodal discovery surfaces bundles, accessories, and missing products
- ROI modeled on 12M GMV uplift, not infrastructure cost recovery
- Fair assumption: existing Labs investment makes marginal ROI disproportionately high
-

> This ROI is driven by capability leverage, where existing Flipkart Labs investments are converted into higher conversion, lower returns, and wider Gen Z baskets.

APPENDIX

Metric	Modeled Guesstimate	Why It Matters
Season 1 content investment	**₹75–90L**	6–8 episodic life-moment web series + production
Episodes produced	**8 episodes**	hostel move-in, first salary desk, glow-up room, trip packing, etc.
Average episode reach	**4–5M views**	social virality + creator reposts + homepage feed
Total blended reach	**30–35M impressions**	cross-platform + Flipkart feed + creator collaborations
Average watch-through rate	**35–40%**	Gen Z relatability + transformation storytelling
Bundle click-through rate	**3–4%**	“Shop the transformation” CTA under each episode
Bundle AOV uplift	**+20–25%**	users buy complete scenes, not single SKUs
Incremental category GMV uplift	**₹4–5Cr**	home, decor, travel, desk, beauty, lifestyle
Repeat browse stickiness uplift	**+25–30%**	episodic anticipation + saved bundles
ROI (12M modeled)	**5x–6x**	content IP monetized through repeat commerce

Key Assumptions (12-Month Content Commerce ROI)

- Season 1 includes 8 episodic transformations built around Gen Z life moments
- Production spend assumes mid-scale creator + studio setup, not premium OTT budgets
- Distribution happens across social media, Flipkart homepage feed, category pages, and creator reposts
- 30–35M impressions modeled from viral transformation formats + solution-based storytelling
- 3–4% bundle CTR assumed from “shop the room / desk / trip” CTA beneath episodes
- Higher AOV is driven by solved scenes, where users buy multiple linked products
- Stickiness improves through episodic anticipation, saved transformations, and recurring seasonal moments
- ROI modeled over 12 months, as content IP keeps resurfacing during repeat need states
- Fair assumption: this is reusable content IP, so every episode behaves like a long-tail conversion asset

The ROI compounds because every episode becomes a reusable transformation template for future Gen Z life moments.

APPENDIX

Metric	Modeled Guesstimate	Why It Matters
Pilot vertical investment	**₹1–1.2Cr**	seller onboarding + QC + authentication + creator drops
Initial supply partners	**300–400 IG thrift stores + creator closets**	fast curated supply wedge
Celebrity / creator drop events	**2 per month**	hype + urgency + Gen Z FOMO
Monthly active buyers (6M)	**40–50K**	niche Gen Z thrift demand pool
Average order value (AOV)	**₹900–₹1,200**	affordable aspiration + unique finds
Monthly GMV by month 6	**₹1–1.5Cr**	creator drops + community thrift + repeat buyers
12M annualized GMV	**₹12–15Cr**	scalable recommerce wedge
Repeat buyer rate	**30–35%**	drop culture + resale treasure hunt loops
Supply relist rate	**20–25%**	users resell previous thrift purchases
ROI (12–18M modeled)	**8x–10x**	marketplace compounding + low inventory risk

- Key Assumptions (12–18M Vertical Wedge ROI)
- Pilot starts with 300–400 curated Instagram thrift sellers + creator closets
- Supply aggregation focuses on fashion, accessories, sneakers, and décor
- 2 creator / celebrity drop events per month drive urgency and traffic spikes
- Monthly GMV reaches ₹1–1.5Cr by month 6 through community resale + limited drops
- AOV remains ₹900–₹1,200, aligned with Gen Z affordable aspiration behavior
- 30–35% repeat buyers modeled due to treasure-hunt browsing and drop anticipation
- 20–25% relist rate assumed, where buyers later become sellers
- ROI modeled over 12–18 months, as marketplace liquidity compounds
- Fair assumption: Flipkart's logistics + trust + payments reduce thrift friction versus Instagram DMs

The ROI compounds as every buyer can become a future seller, creating self-sustaining circular wallet loops.
